EDUCATION

EMORY UNIVERSITY

Bachelor of Science

Atlanta, Ga

Expected 2026

Major in Computer Science; Concentration in AI; Minor in Economics

Relevant Coursework: Object-Oriented Development, Operating Systems, Web Development, DSA, Mathematical Proofs, Formal Methods, Database Systems, Computer Architecture, Computational Linguistics, Machine Learning, Artificial Intelligence

SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL

Web Development and Databases: React, Next.js, HTML/CSS, Jinja2, Flask, PostgreSQL, Supabase, SQL, Exposure to NoSQL concepts

Developer Tools: Git, GitHub, Docker, Linux, CI/CD, GitHub Actions

EXPERIENCE

Office of the DeKalb County District Attorney

Atlanta, Ga

Data/Intelligence Analyst

Spring 2026

- Cleaned and Filtered legal datasets by developing/writing scripts using Python packages like Pandas to process structured data (i.e, Microsoft Excel, CSV, JSON, XML, Databases entries, etc.)
- Performed exploratory/data analysis on cleaned data, identifying trends, making predictions based on temporal, geographic, and network-based patterns and contributing those data visualizations to government officials to lead policy decisions.
- Managed relational databases and cloud hosted data systems (e.g. Azure/AWS) to support secure data access and sharing.

AI Data Research Lab

Atlanta, Ga

Team Member

Fall 2024

- Worked with The Carter Center to employ Large Language Models like RoBERTa and Machine Learning techniques to use data manually categorized by me and my team members related to the 2024 election to observe trends in media sentiments relating to political parties.

Hackathon: Belmont / Fisk for Social Justice

Nashville, TN

Team Lead

Spring 2024

- Won 1st place in the Belmont/Fisk Social Justice Hackathon with the use of Graph Theory applications to optimize public transportation and Tableau to present the results.

PROJECTS

Gitfolio | Flask, OpenAI API, OCR, Python,

Atlanta, GA

Team Lead

Spring 2025

- Worked on the design and implementation of an AI-powered system that automates portfolio creation by converting resumes into dynamic websites.
- Leveraged NLP, OCR, and transformer-based language models for resume parsing, content extraction, and chatbot-assisted customization.
- Demonstrated how language models in web automation can streamline digital self-presentation, lowering barriers for students and early-career professionals.

Peer Portfolio | Full-Stack AI Financial Analytics Platform

Spring 2026

- Developed a full-stack prediction market analytics platform with a remote team, integrating data from multiple APIs to unify portfolio tracking, P&L analysis, and AI-generated market insights across trading platforms.
- Built scalable backend services using Next.js, PostgreSQL, Supabase, and scheduled synchronization jobs while implementing secure authentication, database policies, and automated CI/CD workflows.
- Integrated AI-driven reporting, cloud deployment pipelines, and containerized workflows using modern tooling including TypeScript, GitHub Actions, Docker concepts, and cloud-hosted infrastructure.
