

Imeikan Joseph Ukpong

(615) 719-5556 | imeikan.ukpong@emory.edu | linkedin.com/in/joseph-imeikanukpong

EDUCATION

Emory University

Atlanta, GA

Bachelor of Science in Computer Science; Minor in Economics

Expected 2027

- Relevant Coursework: Object Oriented Development, Operating Systems, Web Development, DSA, Mathematical Proofs, Formal Methods, Database Systems, Computer Architecture, Computational Linguistics, Machine Learning, Artificial Intelligence

TECHNICAL SKILLS

Languages & Technologies: C, C++, Java, SQL, HTML, CSS, TypeScript, JavaScript, Python, PHP, Rust, PostgreSQL, MySQL

Tools & Platforms: React.js, Next.js, Node.js, Flask, Git, GitHub, Docker, Kubernetes, CI/CD, Microsoft Excel/Word/Powerpoint, Tableau, PyTest

EXPERIENCE

Office of the Dekalb County District Attorney

Atlanta, GA

Software Engineer Intern

Summer 2026

- Developed software for exploratory/analytical workflows on legacy legal datasets, writing scripts leveraging Pandas and NumPy to identify temporal, geographic, and network based crime patterns/trends.
- Assisted in securely managing cloud hosted relational databases to support reliable data access and distribution between departments.
- Contributed to the development of Government Policy by providing interactive dashboards and visualizations based on generated analytics data to communicate intelligent findings that impact decision making.
- Worked with legal professionals to build Justice AI, a legal AI Assistant desktop application using Tauri v2 (Rust) base + React/TypeScript/Vite.
- Implemented a complete IPC bridge layer (invoke + event listeners) for the application between the frontend and backend for a pretrained Qwen3-8b model validated on a test suite with 267+ automated tests.

GOOGLE x BASTA

Remote

Software Engineer Apprentice

Summer 2026

- Selected from a pool of thousands of applicants to work with longstanding Google SWE's throughout a 10 week Apprenticeship program.
- Mastered technical programming, data structures and algorithms whilst refining problem solving skills and industry standard practices.

Carter Center AI Research Lab

Atlanta, GA

Data Engineer

Fall 2024

- Manually annotated data for training an LLM (RoBERTa) to categorize social media sentiment scores for electoral outcome predictions
- Was given exclusive access to longstanding Carter Center data on which an ensemble of Machine Learning techniques like Random Forest, XGBoost, etc. were used to produce an informed model

Social Justice Hackathon

Nashville, TN

Team Lead

Spring 2024

- Won 1st place out of dozens teams by utilizing Graph Theory to optimize neglected public transportation routes, presenting data-driven transit solutions directly to Nashville's policymakers and community board members.

PROJECTS

Peer | *Next.js, TypeScript, React, Supabase, PostgreSQL, Railway, Anthropic/Claude, Gemini*

- Developed a full stack prediction market analytics platform with a remote team, integrating data from multiple relevant APIs to unify the portfolio tracking experience.
- Included metrics like P&L analysis, integrating AI-driven reporting and market insights based on existing evaluation measures across trading platforms.
- Built scalable backend services using Next.js, PostgreSQL, Supabase, and scheduled synchronization jobs while implementing secure authentication, database policies, and automated CI/CD workflows.

Justice AI | *Qwen3-8b, fastembed, Tauri 2 (Rust), React, Vite, Tailwind CSS*

- Built a production desktop application using Tauri v2 (Rust) + React/TypeScript/Vite, implementing a complete IPC bridge layer (invoke + event listeners) between the frontend and backend for a legally pretrained Qwen3-8b model.
- Engineered a multi-format document parser supporting 16 file types (PDF, DOCX, images via OCR, spreadsheets, email, web formats) with fallback chains and format-specific error variants.
- Generated 267+ automated tests (Rust unit + integration) and a 77-case evaluation harness with baseline comparison for retrieval quality regression testing for our pretrained LLM.

Gitfolio | *SQL, Java, Python, Flask, OCR, OpenAI*

- Designed and implemented an AI based OCR system that automates portfolio creation by converting resumes into dynamic websites.
- Leveraged NLP, OCR, and transformer-based language models for resume parsing, content extraction, and chatbot- assisted customization.

LEADERSHIP & INVOLVEMENT

National Honors Society of Black Engineers – 2024–Present

Member, ColorStack – 2023–Present

Member, Computer Science Club – 2024–Present
